

TERRAM[®] HYDROTEx™

The most permeable sand blanket alternative in the market

TERRAM Hydrotex™ is a permanent solution for areas where clay pumping can cause a loss of trackbed stability. It removes the requirement for a sand blanket, providing a durable solution for rail infrastructures that prolongates trackbed life and ensures trackbed stability.

Hydrotex benefits

Hydrotex is made to replace 100mm of sand and geotextile. It's use saves time and money as well as lowering the projects carbon footprint.

More permeable than the previous versions, water can pass through more easily than any products in the market.

Compared to traditional solutions, Hydrotex does not require excavation, material removal or sand importation.

Technical Data

Product	Width	Length	Weight (Nominal)	PADS	TERRAM Prt. No.
Hydrotex Roll	3.9m	25m	165kg	057/101453	171347
Hydrotex Roll	3.7m	25m	157kg	057/101454	171323
Hydrotex Roll	3.5m	25m	148kg	057/101455	171309
